

COUNTRY HOUSE WITH PLOT OF 2.14 HECTARES IN PERALADA, COSTA BRAVA

COUNTRY HOUSE WITH PLOT OF 2.14 HECTARES IN PERALADA, COSTA BRAVA

Country house with rustic land of 2.14 hectares in Peralada, Costa Brava, ideal for a hotel or rural hostel. Beautiful panoramic views, south facing, possibility of enlargement. Possibility of doing up to 9 bedrooms and 7 bathrooms.

Mas La Cortalera is a country house from the 16th century, Catalanian architectural heritage, on the road between Peralada and Mollet de Peralada (Alt Ampurdán, on the Costa Brava, province of Girona).

Well-preserved building, with a very solid structure. The roof of the residence is in perfect condition, waterproof, redone in the year 2000 in concrete and steel beams. The floor tiles are red terracotta.

The building, with a total built area of 895 m², consists of:

Main building (house): 624 m² built, with 3 floors. – Ground floor: it was entirely dedicated to agricultural and livestock uses – First floor: housing use – Second floor: very large attic, part of the house

Annex building + adjoining building: 271 m² built. – Annex building: consists of 2 floors, warehouse, both floors for haystacks and livestock use. – Adjoining building: semi-ruined structure of agricultural and livestock roofs.

Of the total 895 m² built, 509 m² are on the ground floor (the 3 buildings included), 334 m² on the 1st floor, and 52 m² on the 2nd floor.

According to the Special Plan for Farms and Country Houses of Peralada (we have it available), the following is allowed in this property: – For housing: buildability increase of 5%. – For hotel and rural tourism: an expansion of the buildable area of up to 2,000 m² (including the current 895 m²) is allowed as long as the current ceiling is not exceeded by more than 20%. – The construction of a swimming pool is allowed.

We highlight that the property includes 2 identical water wells, both of them with water, one inside the house and the other about 30 meters away, within the plot. – Water level from ground level: 3.80 meters – Water phreatic level 1st floor: 6 meters – Water level on the ground 2nd floor: 9 meters – Depth of water in the well: 4.30 meters – Diameter of the well: about 1 meter

These wells must be reactivated by means of a water pump. Currently the property is not connected to city water. It does not have a septic tank or sewage system. It does have an electricity supply, with a registered meter.

The south orientation of the house favors a greater luminosity in winter and the consequent saving of heating. In summer, the thickness of the walls keeps the interior fresh.
